

ADDENDUM

This is an addendum to the instruction manuals

IN 672 for

**Orion® EQ-13 Equatorial Telescope Mount and Tripod
(#55026)**

and IN 153 Rev D for

**Orion® SpaceProbe™ 130mm EQ Equatorial Newtonian
Reflector Telescope (#9007)**

Since publication of the instruction manuals noted above, a change has been made to these two products. The mount attachment knob – which is labeled “E” in **Figure 1** of the manual for the EQ-13 mount – is now installed in the tripod mounting platform at the factory rather than needing to be installed by the user. In addition, the washer, which is also labeled “E” in **Figure 1** of the manual for the EQ-13 mount, is no longer included as it is not needed. **Figure 1** of the manual for the SpaceProbe 130mm EQ shows the mount attachment knob correctly installed under the tripod mounting platform, without washer.

Accordingly, section 3 of “Part II: Assembly” in the instruction manual for the EQ-13 Mount and section 3 of “Part III: Assembly” in the manual for the SpaceProbe 130mm have been revised as follows:

3. Now you will attach the equatorial mount (B) to the tripod. Place the base of the mount onto the tripod’s mounting platform, and then simply thread the captive mount attachment knob under the tripod clockwise up into the mount until it is tight (**Figure 3**).

Please make note of this change.
